

HepFlex® Soil flexible pan connectors provide the perfect solution when connecting two fixed points within a soil system.

Where the length of the WC connection is non-standard, the HepFlex® Soil pan connector can be extended to the required length.

The socket, with its internal seal, procedures a flexible self-sealing system that allows for up to 14° deflection for direct connection between new horizontal pans and existing 104° pipework.

- Flexible pipe retains its profile once installed.
- Push-fit joint avoids the need for mastics and jointing compounds.
- Internal self-sealing EPDM rubber seal withstands extreme temperatures and allows for movement between pipework and pan.
- Multiple finned pipe spigot seal ensures reliable flexible sealing in a variety of pipes.
- Provides larger offset within a shorter distance, reducing fittings requirements and installation time.

HepFlex® Soil makes light work of common installation problems such as pipe offsets, 'question mark' profiles, 90° bends and double 90° bends.

CONNECTOR TYPE	NOMINAL DIAMETER (mm)	NOMINAL EXTENDED LENGTH (mm)
LONG (S170)	4.33 inches (110 mm)	36.4 inches (925 mm)
SHORT (S171)	4.33 inches (110 mm)	26.5 inches (675 mm)
EXTRA SHORT (S172)	4.33 inches (110 mm)	16.1 inches (410 mm)
